

SECURING PEACE OF MIND  
FOR OVER 35 YEARS

NOW, PROVIDING PEACE OF MIND  
FOR YOUR HOME...

WIRELESSLY!

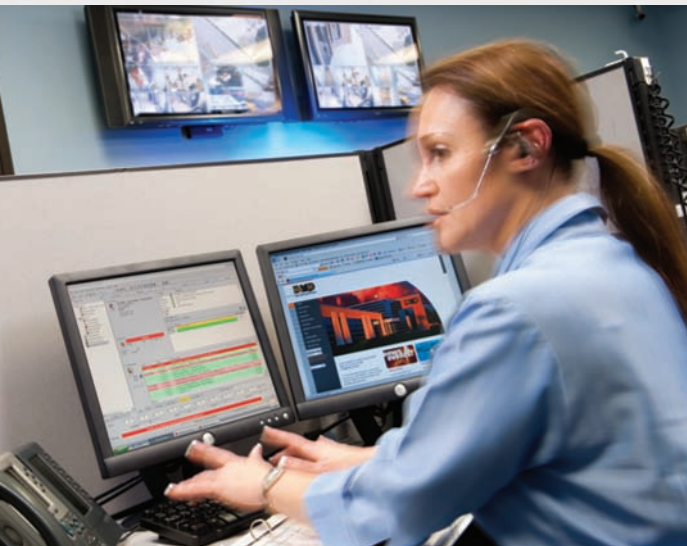

Introducing:

**XTL**

Wireless Security Systems

Selecting your security system is serious business. You need to be sure that the system you buy has all the features you might want, but still simple to operate. Above all, you need to know that it will provide reliable, around-the-clock protection.

The XTL Wireless Security System delivers all that and more, with special features that let you take control of your system no matter where you are.

### **SOLID, CELLULAR CONNECTION**

Your security system is monitored via a reliable cellular connection to your monitoring station. Compared to older technology that uses a conventional phone line, your cellular connection won't be lost due to down trees or bad weather, and it can't be cut by a burglar.

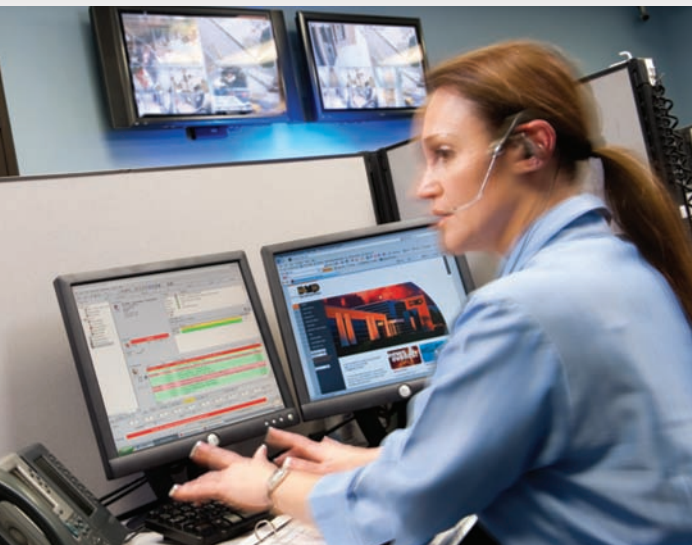

## **THE RIGHT SYSTEM FOR YOUR HOME**

To protect your family and your home, you can trust the made-in-America XTL. The XTL has all the reliability and features of large-scale systems, now in a more compact package that's perfect for protecting your home.

Selecting your security system is serious business. You need to be sure that the system you buy has all the features you might want, but still simple to operate. Above all, you need to know that it will provide reliable, around-the-clock protection.

The XTL Wireless Security System delivers all that and more, with special features that let you take control of your system no matter where you are.

### SOLID, CELLULAR CONNECTION

Your security system is monitored via a reliable cellular connection to your monitoring station. Compared to older technology that uses a conventional phone line, your cellular connection won't be lost due to down trees or bad weather, and it can't be cut by a burglar.

### STAY IN TOUCH

Using the built-in cellular capability, our system offers In Touch™ Messaging Features that let you send commands via text messages to remotely control alarm systems, and to receive text alerts regarding system status and activity

- Turn your system on or off from your cell phone
- Check the status of your system
- Receive messages to as many as three phone numbers
- Know when your child arrives home and turns off the system

### NO WIRES

Most older systems require wires to connect the alarm system to the various sensors. Your XTL security system is completely wireless!

- No holes required for wires
- Faster, cleaner installations
- Less damage to your home

### CREATE A SYSTEM YOU CAN TRUST

Working with one of KEV Security's professionals, you can create a security system tailored to your home and lifestyle. In addition to the small, easily concealed alarm panel, most systems will include the following wireless devices:

- An easy-to-use keypad at your main entrance
- A keyfob, like your car remote, to turn your home alarm system on and off. For convenience, your keyfob can also control things like garage doors, exterior lighting, and sprinkler systems
- Sensors at selected doors and windows that will sound an alarm when opened
- Motion sensors that detect movement when the system is on, but are immune to false alarms caused by pets

For additional protection you can also include:

- Sensors that respond to the sound of breaking glass
- Smoke detectors that can alert your system to automatically call the fire department

Complementing the XTL is a wide array of wireless accessories, such as keypads, motion detectors, keyfobs, door contacts and smoke detectors.
